- **Free to all Clients.**
- **View, Print & Save Records from anywhere, instantly.**
- **Free Editing/Updating Service.**
- **Currently used by over 3,000 clients.**
- **Total Duty Holder Control.**

Why do I need TraQ-it®?

Any Duty Holder who has a responsibility for Electrical Safety must manage a significant amount of documentation associated with electrical testing.

Although designed for electrical compliance, TraQ-it® can also be adapted for other forms of reporting, including Lift Maintenance and Fire Alarm records, providing a single platform for multi-discipline asset management.

Do I need any additional software?

No. All you need is an internet connection.

Version History and Management Information

Distribution Boards and associated equipment are often inspected and tested several times over a number of years.

Each report generated is automatically stored in chronological order within TraQ-it®, providing a complete history and audit trail for every item tested.

TraQ-it® and QR Codes

As an optional service, Guardian engineers can affix QR code labels to Distribution Boards during inspection and testing.

Each QR code is uniquely linked to the relevant Distribution Board within your TraQ-it® account.

When scanned, the user is directed instantly to the corresponding documentation, such as the Electrical Installation Condition Report or Distribution Board schedule.

Network Drawing Links

As an additional option, TraQ-it® allows clients to view Network Drawings directly on the platform.

Live links can be embedded within each drawing, enabling users to click on any Distribution Board reference within a PDF and automatically navigate to the corresponding schedule or record within TraQ-it®.

Instant Reporting

Once your testing records have been processed by Guardian's Quality Assurance department, they are uploaded to your personalised TraQ-it® website and are immediately available for viewing, filtering and printing.

TraQ-it® Features

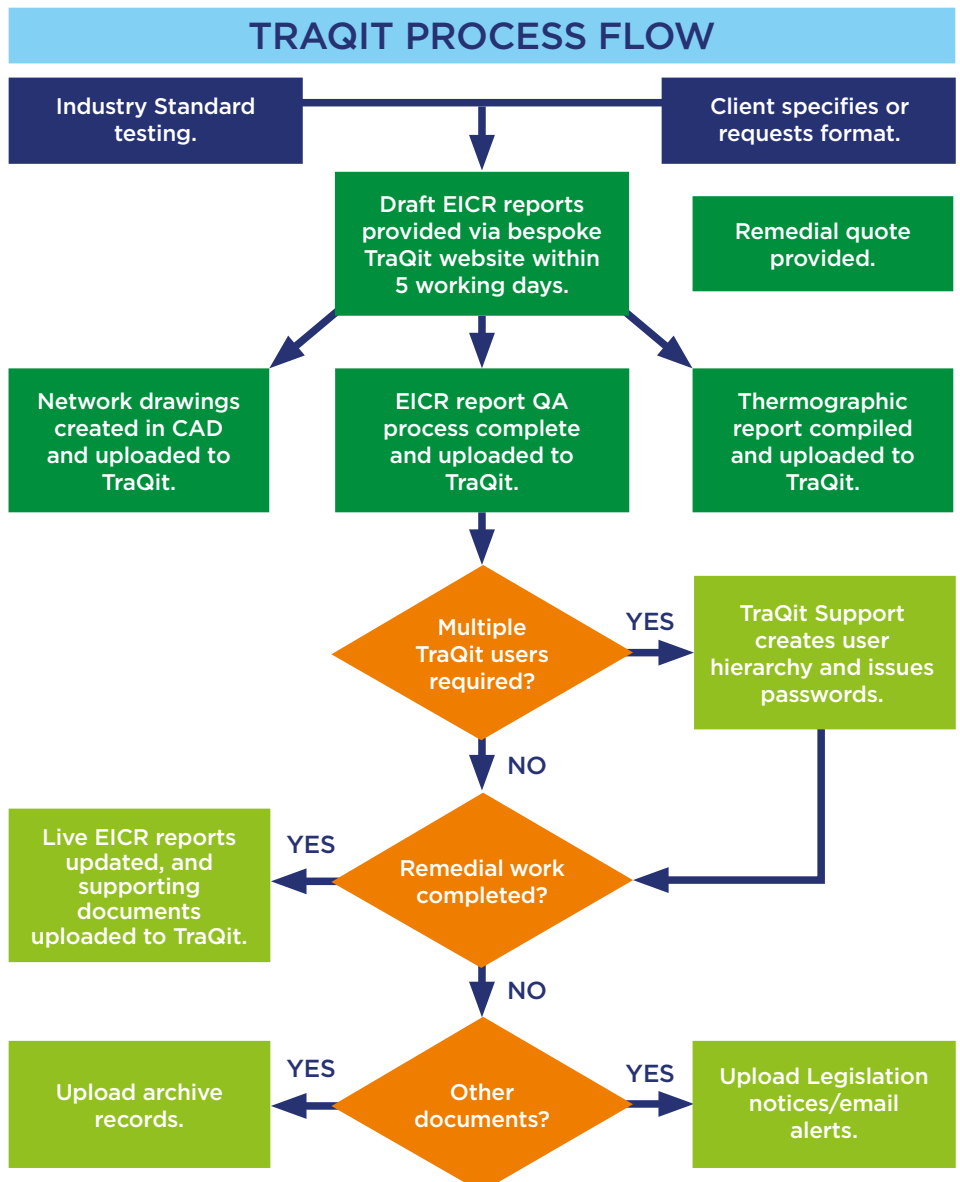

- Fully functional, interactive online solution with bespoke client configuration.
- Hierarchical permission levels for document control and user management.
- Access to all Health & Safety documentation associated with inspection and testing.
- Search and filter functions for locating switchgear, Distribution Boards, or failed items.
- Built-in email alert functionality.
- Capability to upload and maintain archived records.
- Complete version history for management audits.

TraQ-it® Benefits

- Achieves compliance with Regulation 4 (1) and (2) and paragraph 69 of the Electricity at Work Regulations.
- Records easily updated – ensuring all data remains current and compliant.
- Reduces costs on future inspection and testing programmes by maintaining current, accurate documentation.
- Editing rights available to the client, or Guardian can manage updates on your behalf.
- Free editing and update service as standard.
- Total record control and guaranteed future cost savings.

How It Works

1. Testing is carried out on site by Guardian Electrical engineers.
2. Data and reports are quality-assured and uploaded to your dedicated TraQ-it® site.
3. QR code labels (optional) are affixed to Distribution Boards for instant data access.
4. Reports and drawings are available via the secure online portal.
5. Remedial works and updates are uploaded, maintaining a complete, live record of compliance.
6. The Duty Holder's responsibility is fully discharged – Closing the Loop.

Total Duty Holder Control

TraQ-it® delivers complete transparency, enabling Duty Holders to demonstrate compliance, manage risk, and maintain full visibility across all electrical assets. It ensures documentation, actions, and verification are seamlessly connected - Closing the Loop from inspection to compliance.
